equip 10" box

The cabinet is often used for the realization of small projects such as home networks or small company networks (SOHO).

Overview

The 10" cabinet has a robust welded construction. High quality processing and the newest technologies ensure a long operating life time. The cabinet door is glass standardly but it can be replaced by steel or perforated doors if required. The hinge system enables a comfortable access.

Application

Ideal solution for installation of 10" components. The cabinet is often used in realizations of small projects such as home networks or small company networks (SOHO). It is a popular accessory of standard 19" cabinets.

Adjustable rails

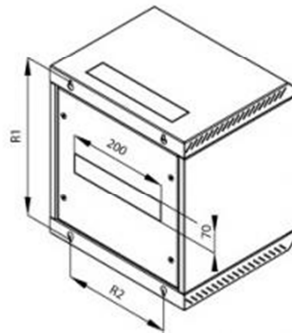

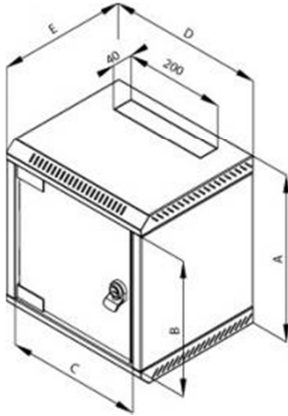

10" rails are adjustably attached to the cabinet construction in predefined positions.

Breakout-type blanking panels

Cable openings covered with breakout-type blanking panels are located in the top, bottom and rear part of the cabinet.

Key Features

- pre-installed as modular 10" system
- door with safety glass
- easy and quick installation
- compact design
- W 295 mm / D 260 mm
